

RACK PROTECTION

For an optimum in warehouse protection

BOPLAN

The Ultimate Safety Materials Manufacturer

Boplan designs, develops and manufactures durable and extremely effective safety barriers for demanding environments. The focus is on the protection of people, vehicles, buildings and infrastructure. We only use high-quality and extremely strong plastics, so the features of traditional raw materials become meaningless.

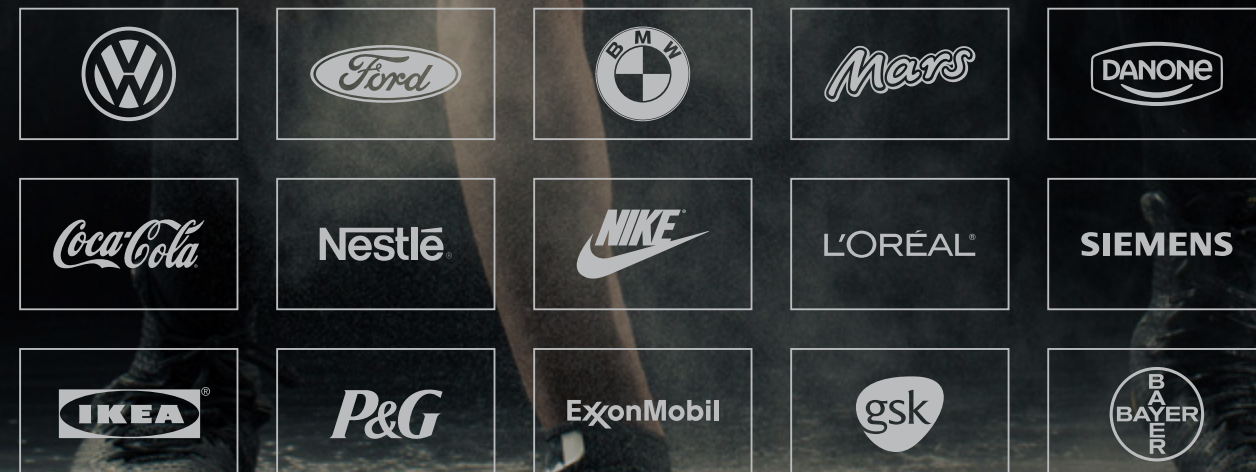

Boplan modular systems are the most innovative available on the market and are used to secure industrial buildings, warehouses, production halls, airports, drilling platforms and (petro)chemical sites. We offer a solution for any specific application.

Thanks to our passion for quality and sense of innovation, we have become one of the sector's leading companies. All products and systems are tested in advance to meet the highest standards.

OUR MISSION:

Boplan is committed to create extraordinary products and challenge existing standards in industrial safety! We do this through our talented and dedicated team, a constant drive for innovation, and a passion for exceeding our customer's expectations.

RACK PROTECTION

For an optimum in warehouse protection

Rack protectors will not only save you from considerable warehouse damage, they will also help you prevent human suffering. Crashes between racking and forklifts are among the most common workplace accidents in warehouses. Warehouse operatives are often under severe time constraints and often have to manoeuvre quickly in a relatively small space. A crash against a rack is therefore an accident waiting to happen. Almost every time, these types of crashes lead to material damages with costs going through the roof, all because of rack collapse, often even aggravated due to an uncontrollable domino effect. In addition, this almost always causes life-threatening situations for the forklift driver as well as the other staff that happen to be in the warehouse at that time.

PREVENT WORKPLACE ACCIDENTS WITH SOLID RACK PROTECTION

By installing Rack Protectors from Boplan's FLEX IMPACT® family, you can almost entirely eliminate the chances of this type of disaster scenario. This impact-resistant series of materials for rack protection is extraordinarily energy-absorbing and flexible. After a crash, the rack protection will return to its original shape and retains its external appearance and properties, whilst leaving your racking intact.

RackBull®

Universal Rack Protector

- Fits multiple rack sizes
- Extremely impact resistant
- Safety yellow (other colours available upon request)
- Retains its shape, easy to maintain
- Easy installation

Impact foam

Dust cap

Optional installation kit

Fits multiple rack sizes

INSTALLATION BY MEANS OF ONE SINGLE CLICK

As from now on worrying about the right size and complex installation procedures are ancient history. Just push the RackBull against the rack support rails and you will automatically hear a click. The RackBull is now connected. Quick, efficient and extremely simple!

Step 1: Click, Step 2: Done!

EXTREMELY IMPACT RESISTANT · AVAILABLE AS RACK ENDS, RACK PROTECTORS AND BOLLARDS · MODULAR AND EASY TO INSTALL · RETAINS SHAPE, LOOK AND FEATURES AFTER COLLISION

RACK PROTECTORS

Perfect protection for racks

Collisions with warehouse racks can have far-reaching consequences. They almost always result in extremely high material costs when the racks collapse, often made worse by an uncontrollable domino effect. Moreover, this almost always leads to life-threatening situations for the forklift truck driver or for other people in the building. Such disaster scenarios can now easily be prevented by installing our FLEX IMPACT Rack Protectors.

▶ RACKBULL®

The universal rack protection that fits all racking

The RackBull from Boplan is an innovative rack protection system within the FLEX IMPACT® range, to help prevent rack collapse due to crashes. The lack of a single international standard in racking dimensions makes it particularly difficult for companies to find rack protection that will fit on all of their racking. After all, there are currently various diameters common in rack supports. RackBull deals with that problem in a spectacular way. With this rack protection, you won't have to worry about exact measurements anymore, because RackBull is the first universal rack protector in the market.

▶ RE RACK END

Crash protection at the ends of your racking

The RE Rack End is a perfect shield for the ends of your racking. Warehouse operatives are often under severe time constraints when they have to manoeuvre their forklifts, Clark lifters or pallet trucks in the aisles between the racks. A crash is often just a corner away, causing the collapse of the racking and sometimes even causing a serious domino effect.

▶ RE RACK END WITH SUPPORT

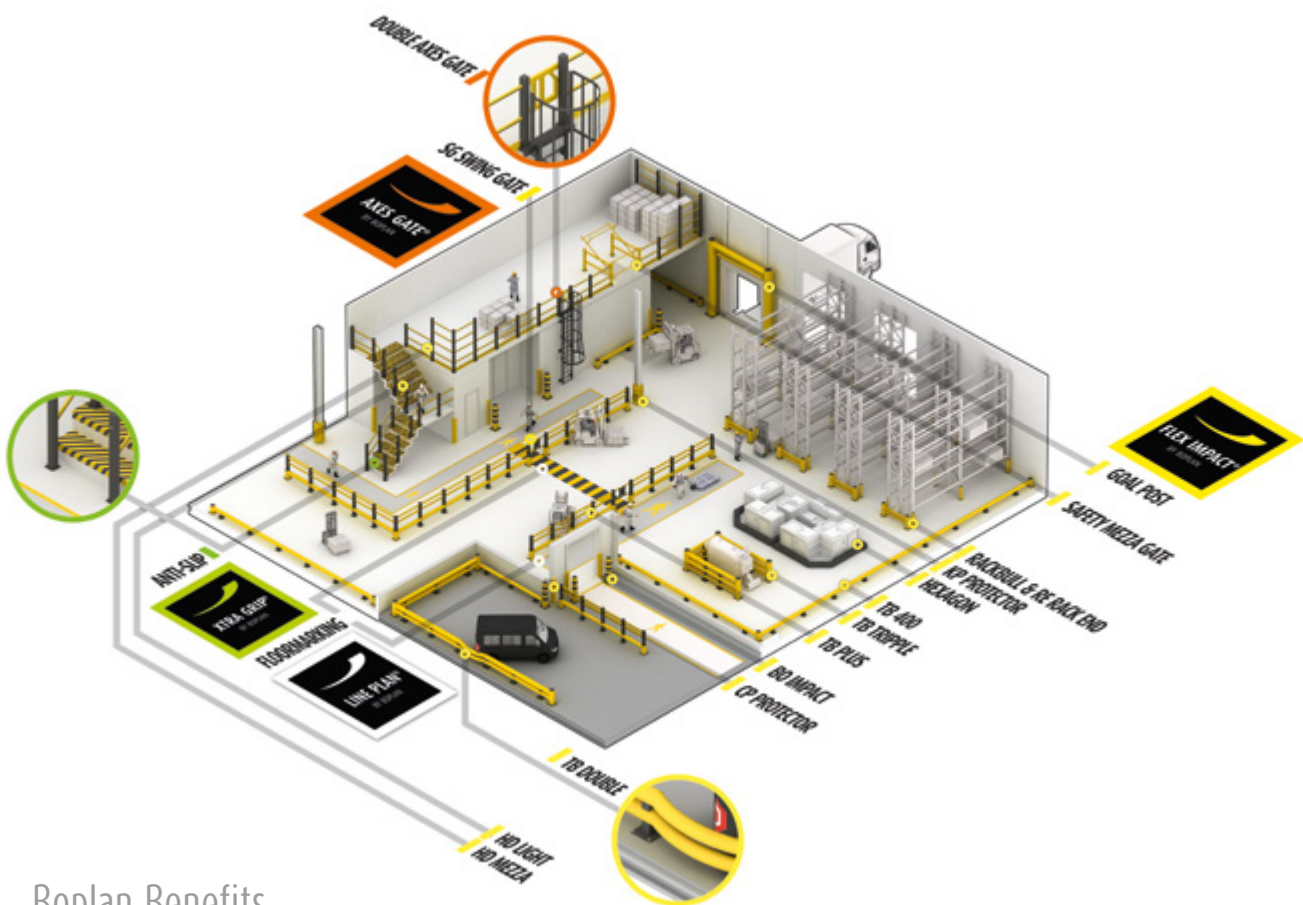

Fortified crash protection for racking

The RE Rack End with Support is a fortified version of the existing RE Rack End from the rack protection series in the FLEX IMPACT® family. The fortified mid-post provides extra support and robust reinforcement, protecting from collisions involving the ends of your racking. Warehouse operatives who are often under severe time constraints sometimes collide with the racks when they have to manoeuvre their forklifts, Clark lifters or pallet trucks in the aisles of your warehouse. The consequences cannot be underestimated: rack collapse, damaged goods, and sometimes also physical injury.

Discover our large product range

It's easy to step over floor markings, not physical barriers. Tape markings are a good way to set traffic rules and should be used, but people tend to ignore them when convenient. Keeping foot and forklift traffic separated is one of the best ways to prevent devastating forklift accidents. It can be as simple as creating traffic lanes using LINE PLAN floor taping to indicate where workers should walk in moving through a facility. In critical high-danger, high-value areas, you may need a solid FLEX IMPACT® physical barrier. To better ensure forklift and foot traffic don't mix, install rails along those traffic demarcations to prevent a forklift from entering into the pedestrian lane and to keep pedestrians within confined boundaries and access points.

Boplan Benefits

| | | | | | | |
|---|--|---|--|---|---|---|
|  Long lifespan = cost saving |  Strength equivalent to steel |  Lightweight compared to steel |  Easy to use Modular design |  No repaint |  No floor damage |  Optimal visibility |
|  No corrosion |  Chemical resistant |  Fire retardant |  Anti-static |  UV resistant |  Recyclable & low ecological footprint |  Tested & approved |
